What type of energy storage projects are recent contracts for?

Recent contracts are predominantly for much larger transmission-connected energy storage projects. Earlier energy storage contracts were significantly more expensive across all grid domains, and they generally reflect the cost reductions seen in the global storage industry.

What does the PU's Energy Storage Procurement Framework do?

The PU's Energy Storage Procurement Framework provides crucial motivation to the development of both demand and supply in this marketplace. Since the time of Assembly Bill 2514 and through 2021 California built a rich ecosystem for energy storage research and development, commercialization, and project deployment.

Should energy storage be co-located with solar?

There is a growing interest in developing energy storage resources paired with solar, driven by cost synergies and tax incentives. However, co-location benefits can be offset by more restrictive operational and siting constraints, which may reduce grid value compared to standalone development.

When will the energy storage projects be installed?

The energy storage projects will be installed by the end of 2024. In 2013, the CPUC issued Decision 13-10-040 and directed California's three large investor-owned utilities to procure 1,325 megawatts of energy storage by 2020.

FEMP also supports federal agencies with energy procurement, specifically off-site energy procurement options. FEMP provides resources and assistance to federal agencies based on ...

While the energy storage market continues to rapidly expand, fueled by record-low battery costs and robust

policy support, challenges ...

These resources provide information and best practices for federal facilities interested in procuring on-site solar photovoltaic (PV) systems.

Learn about the essential elements of a solar RFP; receive introductory guidance on how to evaluate any proposals received; and be directed towards tools, resources, and ...

This energy storage technical specification template is intended to provide a common reference guideline for different stakeholders involved in the development or deployment of energy ...

Chapter 1 (Market Evolution) provides historical policy and planning context to the evolution of California's market for stationary energy storage from about 2010 when California Assembly ...

While the energy storage market continues to rapidly expand, fueled by record-low battery costs and robust policy support, challenges still loom on the horizon--tariffs, shifting ...

This chapter supports procurement of energy storage systems (ESS) and services, primarily through the development of procurement documents such as Requests for Proposal (RFPs), ...

Learn about the essential elements of a solar RFP; receive introductory guidance on how to evaluate any proposals received; and be ...

In addition to bid information, we offer in-depth Energy Storage market research, procurement analysis, historical archives, bid consultancy services, and insights into top ...

Streamlined solar and energy storage buying process through the use of a proven cooperative procurement program. Free project feasibility study and savings analysis for any public agency ...

FEMP also supports federal agencies with energy procurement, specifically off-site energy procurement options. FEMP provides resources and ...

Decide whether to include solar + storage projects in a procurement based on storage benefits for addressing energy cost savings and/or resilience use cases at specific sites.
