What will Bulgaria's energy system operator do in 2024?

By the end of 2024, Bulgaria's Electricity System Operator (ESO) will finalize its investment program aiming to ensure the grid connection of new power plants with a total installed capacity of 4,500 MW, primarily renewables. ESO, the country's transmission system operator, has invested more than EUR 25 million in digitalization of the grid.

Why is energy storage growing in Bulgaria?

Energy storage in Bulgaria is expanding rapidly as the government awards nearly 10 GWh of capacity to 82 projects, boosting renewable energy reliability and grid stability.

How will the selected storage systems be distributed in Bulgaria?

The selected storage systems will be geographically distributed across Bulgaria and connected either to the national transmission grid or local distribution networks. All awarded projects must be operational by March 2026.

What does Bulgaria's plan mean for the energy sector?

In particular, Bulgaria's plan will accelerate the decarbonisation of the energy sector, promote the large-scale deployment of digital infrastructure, including in rural areas, as well as support investments in improving the business environment, education and skills, research and innovation, social protection and healthcare.

New investments in renewable energy generation, primarily solar photovoltaics (PV) in Bulgaria and neighboring countries, drove down power prices during periods of high supply.

Summary: Bulgaria's energy sector is rapidly adopting 220V uninterruptible power supply (UPS) systems to stabilize grids and support renewable integration. This article explores market ...

Bulgaria's Electricity System Operator (ESO) has signed a contract with the country's Ministry of Energy for the first phase of its Greenabler project, designed to modernize ...

Summary: Bulgaria's energy storage power stations are transforming how renewable energy is stored and distributed. This article explores their applications, benefits for grid stability, and ...

By the end of 2024, Bulgaria's Electricity System Operator (ESO) will finalize its investment program aiming to ensure the grid connection of new power plants with a total installed ...

Transformation of AES Galabovo into a large-scale energy storage facility using proven technology implemented in concentrated solar power plants (CSP) using molten salts

Pursuant to Article 14 of Regulation (EU) 2018/1999, the Republic of Bulgaria is committed to submit to the European Commission a draft updated Integrated National Energy and Climate ...

This investment aims to expand the country's energy infrastructure and support the growing share of ...

This investment aims to expand the country's energy infrastructure and support the growing share of intermittent renewable power, particularly from solar and wind.

In response to the energy market disruption caused by Russia's invasion of Ukraine, the Commission launched the REPowerEU Plan. The Recovery and Resilience Facility is at the ...

By the end of 2024, Bulgaria's Electricity System Operator (ESO) will finalize its investment program aiming to ensure the grid connection of new power ...

The Verila Solar PV Park is a 124MW solar PV power project located in Kyustendil, Bulgaria. Post completion of construction, the project was commissioned in 2023.

In response to the energy market disruption caused by Russia's invasion of Ukraine, the Commission launched the REPowerEU Plan. The Recovery ...
