---

China is advancing a nearly 1.3 terawatt (TW) pipeline of utility-scale solar and wind capacity, leading the global effort in renewable energy buildout. This is in addition to China's already ...

The China Solar Energy Market is expected to reach 1.23 thousand gigawatt in 2025 and grow at a CAGR of 15.24% to reach 2.5 thousand gigawatt by 2030. LONGi Green ...

China is adding more solar and wind power to its energy grid than any other economy - but that huge buildout has its challenges. Here's what we can learn

China is transitioning to a market-driven framework for solar energy pricing, with the change set to take effect by June 1, 2025. The ...

China will replace its feed-in tariff (FIT) system with a fully market-driven renewable energy pricing model by June 2025, shifting wind and solar projects to competitive ...

The costs of wind and solar power generation in China have dropped significantly compared to early development stages, now ranging between 0.2 yuan (about 3 U.S. cents) ...

This policy promotes the full market-based determination of on-grid electricity prices for new energy sources, including ground-mounted and distributed PV projects, as well ...

From June 1, 2025, China conducts a fundamental change in its pricing policy for renewable energies. Specifically, this means the transition of fixed feed -in tariffs, in which state -based ...

China's solar and windfarms would no longer be guaranteed sales at a fixed price linked to coal benchmarks,
