What is a pure sine wave inverter?

It is for these reasons that a pure sine wave inverter is one of (if not the) most important aspects of your solar array. A sine inverter takes the DC output of your solar array, converts it to AC, and does so in a way which replicates as closely as possible the pure sine wave of grid power alternating current.

Why do you need a sine wave inverter?

Most appliances in your home use AC power, so you need it to convert the DC power that solar panels produce to AC power. It also brings up the voltage to the grid level. A pure sine wave inverter also saves you money, as it's much more efficient than the older, jagged wave inverters.

How does a sine inverter work?

A sine inverter takes the DC output of your solar array, converts it to AC, and does so in a way which replicates as closely as possible the pure sine wave of grid power alternating current. Moreover, pure sine wave inverters amplify the converted current to differing strengths of wattage and voltage.

Are pure sine wave inverters safe?

With a unit as integral to the maintenance and production of your energy supply, it's important that they are as safe to use as possible. Pure sine wave inverters typically come with several in-built protection systems to ensure their own longevity, as well as the longevity and security of your solar panels and appliances.
