What is a bus tie breaker?

In electrical distribution systems, a bus tie breaker is used to connect two sections of an electrical bus serving different power sources. Bus tie breakers are usually open, keeping the two sections separate. When one power source fails, the tie breaker can be closed to maintain service through the section, avoiding a planned service outage.

What is a fused or circuit breaker bus plug?

Fused or circuit breaker bus plugs may be used in conjunction with different types of bus ducts and other busway components... Bus analyzers and bus exercisers are used to monitor and check the performance of a system bus. Bus analyzers are used to monitor and check the performance of a system bus.

Why do you need a tie breaker?

In the context of maintenance, tie breakers offer significant advantages. They can be used to perform maintenance on one of the sources so it can be taken offline, while the other source continues to provide power to the entire load. This ensures uninterrupted service to critical loads.
