In this paper, a comprehensive review is conducted on different offshore petroleum structures. This study examines the fundamentals of all types of offshore structures (fixed and ...

Conventional fixed platforms used for the production of oil and/or natural gas are constructed atop steel jackets that are anchored with steel piles ...

Production systems used for offshore oil and gas production are broadly classified into fixed platforms and floating platforms, based on the form of ...

Offshore fixed platforms are stationary structures anchored to the seabed. They are designed for shallow to moderate water depths, ...

A fixed offshore platform is a large structure used to extract oil and gas from beneath the seabed. These platforms are "fixed" to the seabed by various means, depending ...

A fixed offshore platform is a large structure used to extract oil and gas from beneath the seabed. These platforms are "fixed" to the ...

A fixed platform is a type of offshore platform used for the extraction of petroleum or gas. These platforms are built on concrete and/or steel legs directly planted onto the seabed, supporting a deck with space for drilling rigs, production facilities and crew quarters. Such platforms are, by virtue of their immobility, designed for very long-term use. Various types of structure are used, steel jacket, concrete

In this paper, a comprehensive review is conducted on different offshore petroleum structures. This study examines the fundamentals of ...

A fixed platform is a type of offshore platform used for the extraction of petroleum or gas. These platforms are built on concrete and/or steel legs directly planted onto the seabed, supporting a ...

Whether on offshore platforms, for fracking trucks, mobile drilling rigs, or FPSO units, our container solutions are designed for optimal use under demanding conditions.

Sevan Stabilised Platform (SSP) is a new, cylinder shaped platform type for floating production, storage and offloading of oil and gas. The SSP is basically a mono-hull with circular shape.

Offshore fixed platforms are stationary structures anchored to the seabed. They are designed for shallow to moderate water depths, typically up to 1,500 feet. These platforms are ...

Conventional fixed platforms used for the production of oil and/or natural gas are constructed atop steel jackets that are anchored with steel piles secured into the seabed.

Production systems used for offshore oil and gas production are broadly classified into fixed platforms and floating platforms, based on the form of the platform. A fixed platform is a type of ...

Fixed Platforms: Designed for shallow waters (up to 500 meters) and highly stable, fixed platforms are directly anchored to the seabed. They provide a long-term, durable solution ...

Americase containers are made durable to withstand the rigorous wear and tear of daily use on off-shore rigs or through regular equipment use. ...
