What are China's battery tariffs?

Recent trade actions have introduced significant battery tariffs on goods imported from China. These changes include duties as high as 104% on some clean energy components, including lithium-ion batteries, critical for energy storage and EV systems. According to U.S. import data, lithium battery shipments from China reached \$1.9 billion in 2024.

How are battery tariffs reshaping global trade?

As new battery tariffs and expanded China tariffs continue to reshape global trade, U.S. policymakers and businesses are reevaluating the domestic battery supply chain. This section outlines the current status of U.S. battery production, the resources required to scale it, and the challenges involved in reducing reliance on overseas suppliers.

Why are Chinese lithium batteries being tariffed in US-China trade?

Additional tariffs imposed under recent trade actions push the total tariff on Chinese lithium batteries to approximately 82% by 2026. These tariffs are part of a broader strategy to reduce U.S. dependence on Chinese battery imports and encourage domestic production. Part 2. Why are lithium batteries necessary in U.S.-China trade?

How will tariffs affect battery manufacturers in 2025?

While this is a reduction from a threatened 27.5% rate, it still represents a significant impact for battery manufacturers. Lithium-ion Cells from China: At the beginning of 2025, lithium-ion cells from China, specifically for energy storage systems (ESS), faced a 64.9% cumulative tariff rate.

Baseline Tariff: The regular, standard 3.4% tariff rate on imported batteries regardless of their origin. It's important to note that tariffs on EV batteries were even higher ...

Proposed tariff increases on Chinese lithium-iron-phosphate (LFP) battery imports threaten to disrupt the United States' deployment of ...

This article comprehensively analyses U.S. tariffs on Chinese lithium batteries, exploring the latest tariff rates, their economic effects, and future implications for industries and ...

This article comprehensively analyses U.S. tariffs on Chinese lithium batteries, exploring the latest tariff rates, their economic effects, ...

Trump has announced his sweeping "Liberation Day" global tariffs, with a new China duty bring the effective tariff on batteries to 82%.

In a major policy update announced in May 2024, the tariff rate on lithium-ion batteries from China is set to dramatically increase from 7.5% to 25%. This significant hike is ...

The newly announced trade measures, part of Trump's so-called "Liberation Day" global tariffs, will increase total duties on Chinese-made batteries and battery energy storage ...

Baseline Tariff: The regular, standard 3.4% tariff rate on imported batteries regardless of their origin. It's important to note that ...

Tariffs on Chinese-origin lithium-ion non-EV batteries are scheduled to increase to 25% effective January 1, 2026. Otherwise, ...

Explore how 2025 battery tariffs affect U.S. imports, energy storage, EV production, and sourcing strategies amid rising China tariffs and trade shifts.

Proposed Trump-era policies could hike Section 301 tariffs to 60%, increasing battery storage system costs by 35% or more in the near term, especially for DC blocks ...

Tariffs on Chinese-origin lithium-ion non-EV batteries are scheduled to increase to 25% effective January 1, 2026. Otherwise, batteries of non-Chinese origin storage batteries ...

Donald Trump has announced his sweeping "Liberation Day" global tariffs, with another new China tariff resulting in an effective doubling of the price of batteries and BESS ...

The newly announced trade measures, part of Trump's so-called "Liberation Day" global tariffs, will increase total duties on Chinese ...
