Will T tea build New Zealand's first private 5G network?

Tu Ateahas outlined plans to build New Zealand's first commercial Private 5G network for CentrePort in Wellington. The network is set to go live at the port, which is a key connection for New Zealand's freight and transport system, in the third quarter of this year.

What is CentrePort's private 5G network?

The Private 5G network builds on CentrePort's recent efforts to innovate its port operations, including a pilot scale of an onsite battery energy storage system (BESS) and second solar array, which will improve resilience and enhance the potential for future emission reductions.

What is New Zealand's new 5G network?

The network is set to go live at the port, which is a key connection for New Zealand's freight and transport system, in the third quarter of this year. The Private 5G network will provide port workers with dedicated connectivity across port operations.

What is a private 5G network?

The Private 5G network will also support security at the port and allow for features such as network slicing. Network slicing allows operators to create multiple virtual networks within a single physical 5G network, which is something that can be customized for specific use cases.
