Why is my sigenergy inverter NOT working?

Sigenergy inverters are equipped with smart diagnostics that automatically identify power anomalies and alert users via mobile app notifications, reducing guesswork and downtime.

2. Low Battery Voltage Warnings Possible Causes: Excessive energy usage during low-sunlight hours Battery degradation or improper charge settings Poor system configuration

What happens if the battery voltage reaches the Protection Board?

3) When the battery voltage reaches the voltage set by the protection board, the protection board will cut off the power to protect the battery, but the lithium-ion battery will fall back, and the voltage will rise, which will be a little higher than the voltage set by the protection board. At this time, it can no longer be used.
