Is energy storage a new business model in Thailand?

Energy storage is in its infancy in Thailand, and new business models are already emerging. As the regulatory framework adapts to accommodate new players in the market, we expect to see greater penetration in this area.

Notes Energy Policy and Planning Office, Ministry of Energy, electricity statistics

Does Thailand need a battery energy storage system?

Thailand may lack the Battery Energy Storage Systems (BESS) necessary to navigate supply and demand challenges. The 2024 PDP draft included 10,000 MW of BESS, but this may see the country struggle to fulfil carbon neutrality and Net Zero commitments over the coming decades.

Why is Thailand relying on more than just solar?

To close this gap, Thailand is relying on more than just solar. The government's Alternative Energy Development Plan (AEDP) promotes energy diversification, including storage systems and emerging technologies like green hydrogen. These strategies are designed to not only boost generation capacity but also ensure energy stability and resilience.

What will Thailand's future look like if it adds renewables capacity?

As Thailand plans to add significant amount of renewables capacity in the next 13 years, the government would consider more flexible gas power contract. As a result, thermal power plants will likely see their operational hours cut further. This will lead to costlier coal and gas power.

As the photovoltaic (PV) industry continues to evolve, advancements in Thailand s new energy storage have become critical to optimizing the utilization of renewable energy sources.

This mirrors global trends and signals Thailand's intention to integrate more solar-plus-storage systems into its energy mix, enhancing the reliability of its renewable energy capacity.

Thailand's Power Development Plan (PDP) outlines an ambitious goal: for renewables to exceed 50% of the national power mix ...

Energy storage is in its infancy in Thailand, and new business models are already emerging. As the regulatory framework adapts to accommodate new players in the market, we ...

This tropical paradise isn't just about pad thai and full moon parties anymore - it's becoming Southeast Asia's new energy storage powerhouse. With renewable energy ...

As Southeast Asia's energy hub, Thailand's choices will ripple across ASEAN. Will legacy systems constrain progress, or can smart storage become the cornerstone of a truly modern ...

Thailand may lack the Battery Energy Storage Systems (BESS) necessary to navigate supply and demand challenges. The 2024 PDP draft included 10,000 MW of BESS, ...

A total of two hydrogen and three carbon capture and storage (CCS) plants are expected to be developed in Thailand by the end of 2035. For more detailed analysis of the ...

In 2023, Thailand's primary energy consumption consisted of 83% petroleum (42% natural gas and 41% petroleum products), 14% coal and lignite, and 3% hydropower and imported power.

Thailand's Power Development Plan (PDP) outlines an ambitious goal: for renewables to exceed 50% of the national power mix in the future. Projects like floating solar ...

Increasing energy storage capacity will be critical for integrating higher volume of renewables specifically solar in Thailand's power system. In April 2023, Thailand awarded project rights for ...
