When will a balcony Solar System be available in Germany?

800 W balcony solar system The Solar Package I strategy paper presented by the German Federal Ministry for Economic Affairs and Climate Action (BMWK) also provides for an early increase in the de minimis limit to 800 W inverter capacity. This is expected to be possible from January 2024.

How many solar panels have been installed in Germany in 2024?

This new wave of solar producers aren't just getting cheap electricity, they're also participating in the energy transition. More than 500,000 plug-in solar systems have been installed in Germany, most of them taking up a seamless spot on people's balconies. New data shows another 220,000 PV devices were installed in the first half of 2024.

Does Germany have a solar boom?

Germany was one of the first countries to invest in solar technology, and now produces the most electricity from solar power in Europe. But - as elsewhere - apartment blocks have been late to the party. "The multi-dwelling unit sector in rooftop solar has been really outside of the solar boom, [it] has been really neglected," says Osenberg.

What is a balcony Solar System?

Balcony solar systems or plug-in solar devices, also called mini PV systems, are photovoltaic systems with a maximum feed-in power of up to 600 watts (W) of inverter capacity. These PV modules can be installed anywhere outdoors, including balconies, roofs, exterior walls and gardens.

From a customer point of view, the main difference is that balcony PV is much easier to install. You can buy the kit online, and don't need an electrician to set it up. Unlike for ...
